There are no drivers to install and ADVC55 does not require a power supply when used with a 6pin DV cable.To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Graphic Guru 5.0 out of 5 stars I can import VHS directly into iMove using this device. However, since it uses the old fire wire cable I simply had to purchase two adapters to connect to the new thunderbolt 3 port on my new Mac. This is a very good product and I would definitely recommend it to a friend.The manufacturer was no help and did not stand behind their product. Massive rip off. Resultaten van 8 zoekmachines. A bit of research showed without question that a Firewire based conversion device was the only way to go and that the cheap USB 2.0 devices were a waste of time. De ADVC55 is een compact en makkelijk te gebruiken Videoconverter en is geschikt voor Windows en MAC omgevingen. I tested it fully on day of listing.Composit,svideo,firewire in and outs Items included ADVC100 Firewire cable Brand new Composit cable sealed Power Adaptor User Manual Sell and ship to USA Only Excluding Alaska and Hawaii Fast and FREE SHIPPING You are the light of the world. I called the Canopus helpline and they suggested Microsoft Movie Maker would do the job capture but I cant see anything in there that looks like it will capture Any and all help much appreciated.This is for one verions The ADVC should look to like a camcorder to the capture program if the IEEE1394 aka Firewire and iLink port is working correctly. If using Windows7 you might need to install the legacy IEEE1394 driver. There are many more capable video capture and editing programs should you feel limited by Movie Maker, not the least of which are the EDIUS proucts.Specifications subject to change without notice. Ive tried all the settings in Capture, but still nothing. Its black with some faint wavy blue lines, so it appears its trying to see the output of the Canopus. Ive captured the same material this way into FCP, but due to the frequent timecode breaks in the footage, it cancels the capture at that point, so i rewind a bit, and recapture from that point on. Frustrating.so glad this a very rare thing to have to capture VHS. I was hoping PP CC might do it easier than FCP. Any ideas p.s. Canopus is connected to the Mac via firewire on the front of the computer, same as it was for FCP. I just couldn't leave your cry unanswered, because I myself was in the same sad situation with ADVC110 for about a month, surfing the web, reading multiple posts all over the place. I think also that somebody else may be tortured by the Canopus' set up, and my post could help them, too. I even returned my first

ADVC 110, as I couldn't make it work by any means, and was sure that it was just a faulty unit. Strangely, many people seemed happy with the Canopus, but they didn't bother to explain how they had made it work. I couldn't find an intelligible and concise explanation anywhere till I finally figured it out all by myself. I think also that the Canopus' manual is written poorly; they could have made at least a hint that such a big app like PPro has a particular submenu for their product, and it's thoroughly hidden from a firsttime user. I have a bit different set up than you do, but I'm sure the pattern is still somewhat similar. I'm a Windows person and I use Adobe CS5, but the app is basically the same. Well, this is how I did it 1. Set up the Canopus WITHOUT turning it on. Check, if all of the tiny switches on its bottom are set correctly. If you use PAL VHS, set everything up accordingly read the manual how. 2. Create a new project in PPro. Choose the format etc. It works perfectly for ADVC 110. Find the spot you'll want to record the tape from. Press pause. 5.

Turn the Canopus on aka connect the FW cord. It should trigger PPro. Open the project you've just created. Press F5. You'll see the frame from your VHS player on the Capture screen. Feel free to begin your successful recording. By the way, I use a devoted FW card and the Grass Valley AC adapter. I wanted to make sure that I prevented all possible glitches. Im capturing old VHS tapes of my kids from the 90s and was having no luck figuring out how to make my Canopus work with Premiere. Good luck with all of your tapes. Im using a Canopus ADVC55, in Premiere Pro CC, and it isnt working. Im trying to capture some old footage from a DVDR in a DVD player, and its driving me up the wall. Ive selected ADVC100 in capture device and think Ive done everything it says above. It doesnt make any difference if I set up the file before plugging the device in either. They should know more about this issue. Maybe, their older hardware was a bit different somehow. Most likely, Adobe CC scripts are different now, too. Also if the player has HDMI port its probably HDCP encrypted. Analog capture devices from Grass Valley, Matrox, etc.So the copy protection does not need to be on the disc, the DVD player simply adds it to the analog output. Always. What software do you edit with. If Adobe Premiere, then copy the.vob files from the DVD to your PC hard drive. You can then Import the.vob files into Premiere to edit directly. No capturing necessary. I hadn't thought about that. Actually when I last did this back in 2008 on an older 2005 Mac in Premiere 6.5, it worked, but I was using a different DVD player then, so the DVD player having a copyright security feature maybe the issue. Actually, Lee my timelines are PAL UK thing! but I get your point. This sounds too good to be true but I'll give it a go. I didn't know you could do that. Thanks for your help everybody. I'll let you know how it goes. Thank goodness for that. This has saved me hours of farting about.
